Install

Handy Addons for Elementor adds 20 widgets to Elementor's panel. It needs WordPress 6.9 or later, PHP 7.4 or later, and the free Elementor plugin. Elementor Pro is not needed.

1. In your dashboard, open Plugins, then Add New Plugin.

2. Search for Handy Addons for Elementor.

3. Click Install Now, then Activate.

That's all. There is no account to create, no licence key, and nothing to set up before the widgets work.

Add a widget

Rows per page 8 Search

The twenty widgets and their own files, gzipped (Chart.js and PDF.js not counted)

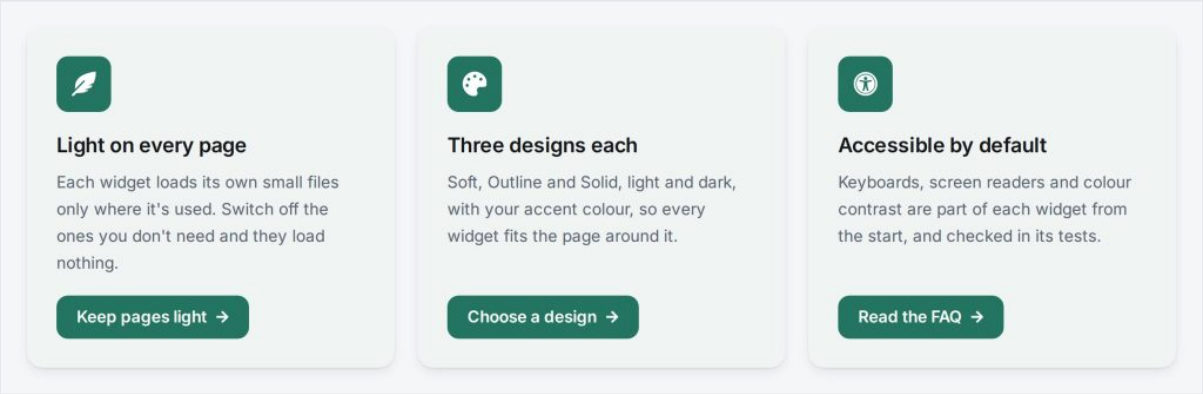
Widget	Group	Used for	Files (KB)	Page
Table	Data and lists	Data, price lists, schedules	8.2	See it
Pricing Table	Data and lists	Plans and prices	2.8	See it
Comparison Table	Data and lists	Plans or products side by side	2.6	See it
Chart	Data and lists	Numbers over time or by part	10.1	See it
Timeline	Data and lists	A history or a roadmap	4.8	See it
Steps	Data and lists	A process, in order	2.3	See it
Specs List	Data and lists	Specifications, requirements	3.3	See it
Counter	Data and lists	Key figures	3.7	See it
All 20 widgets			96.7	

Showing 1–8 of 20 Previous 1 2 3 Next

Open a page with Edit with Elementor. In the panel, the widgets wait in the Handy Addons group, or search for one by name. Drag it onto the page.

Fill in what it shows in the Content tab: rows, plans, steps or text. The widget updates as you type.

Choose a design



Every widget's Style tab opens with its Design section: three designs, two colour schemes and an accent colour.

Design	Cards	Buttons and badges
Soft (default)	White, a thin border, a soft shadow	Pills in a pale tint
Outline	Framed, small corners, no shadow	Outlined
Solid	Tinted with the accent, no border	Filled with the accent

Each design has a light and a dark scheme. The accent colour is yours to choose.

Keep it light

A widget loads its styles and scripts only on the pages that use it.

In the Handy Addons menu of your dashboard, you can switch off the widgets you don't use, one by one or in bulk. A widget switched off leaves Elementor's panel and loads no code at all.

Settings in the Style tab have a reset button beside them, which brings back the design's own value.

Get help

Questions and bug reports are welcome in the plugin's support forum on WordPress.org, where answers help the next person too.

Each widget has a page on our site, with all three designs, a guide to its settings and answers to common questions.
